The Idea

- ▶ Our idea is to build a web application that runs on your smartphone
- ▶ During a tour in the Sapienza “Museo dell'Arte Classica”, it can suggest the next section you could visit based on the time you have spent in the previous sections
- ▶ A user can run the web application for all the duration of the museum tour
- ▶ The smartphone starts collecting data, in an anonymous way, to make the best suggestion for every user
- ▶ The suggestion is sent every time a user is leaving a section

A Possible Scenario

John is very interested in museums, and he is enjoying his tour in section III, but now after he spent some time here he wants to find something similar to visit.

Emma does not like section III and she is trying to find something different from this section. So they are both using our application

A Possible Scenario

A Possible Scenario

A Possible Scenario

User Experience Evaluation

- ▶ We are planning evaluate the user experience using mockups, and after every demo of these prototypes we will collect people's opinions asking for feedbacks.
- ▶ The questions will be mainly on:
 - User interface
 - Application services

Technical Evaluation

- ▶ We will do a technical evaluation performing load tests on all parts of our system:
 - **BLE** IoT device-Smartphone interaction: how many smartphones a single device can handle?
 - **Cloud** IoT device-Cloud interaction: what is the message rate with which the device can send messages to Azure IoT hub?
 - **Responsiveness** Cloud-Smartphone interaction: how fast the smartphone receives the advice on where to go, does it depend from the number of connected devices?

The background features abstract, overlapping green geometric shapes, primarily triangles and polygons, in various shades of green, creating a modern and architectural feel. The word "Architecture" is centered in a green, sans-serif font.

Architecture

IoT board

SmartPhone

Typical scenario

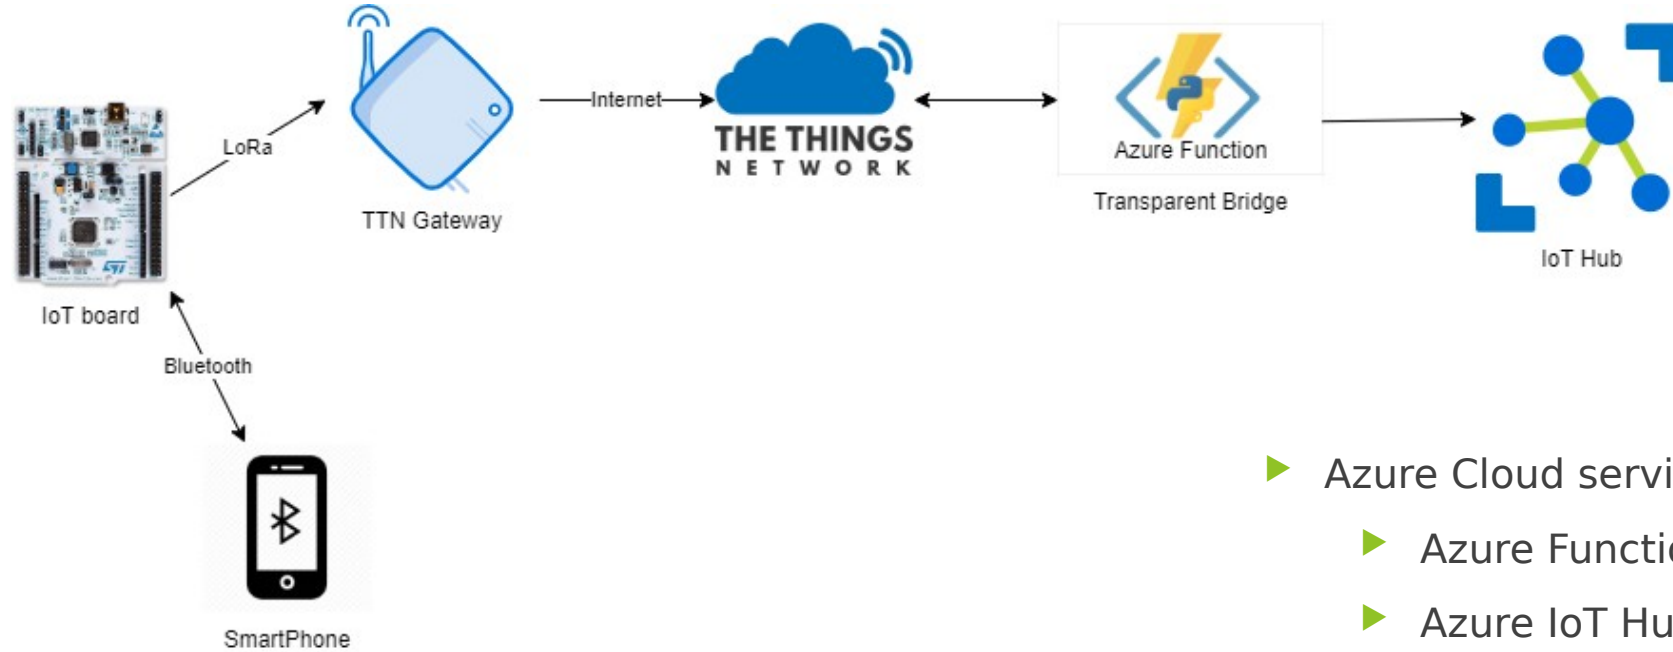

- ▶ BLE technology
- ▶ Bluetooth beacon functionality

The Things Network

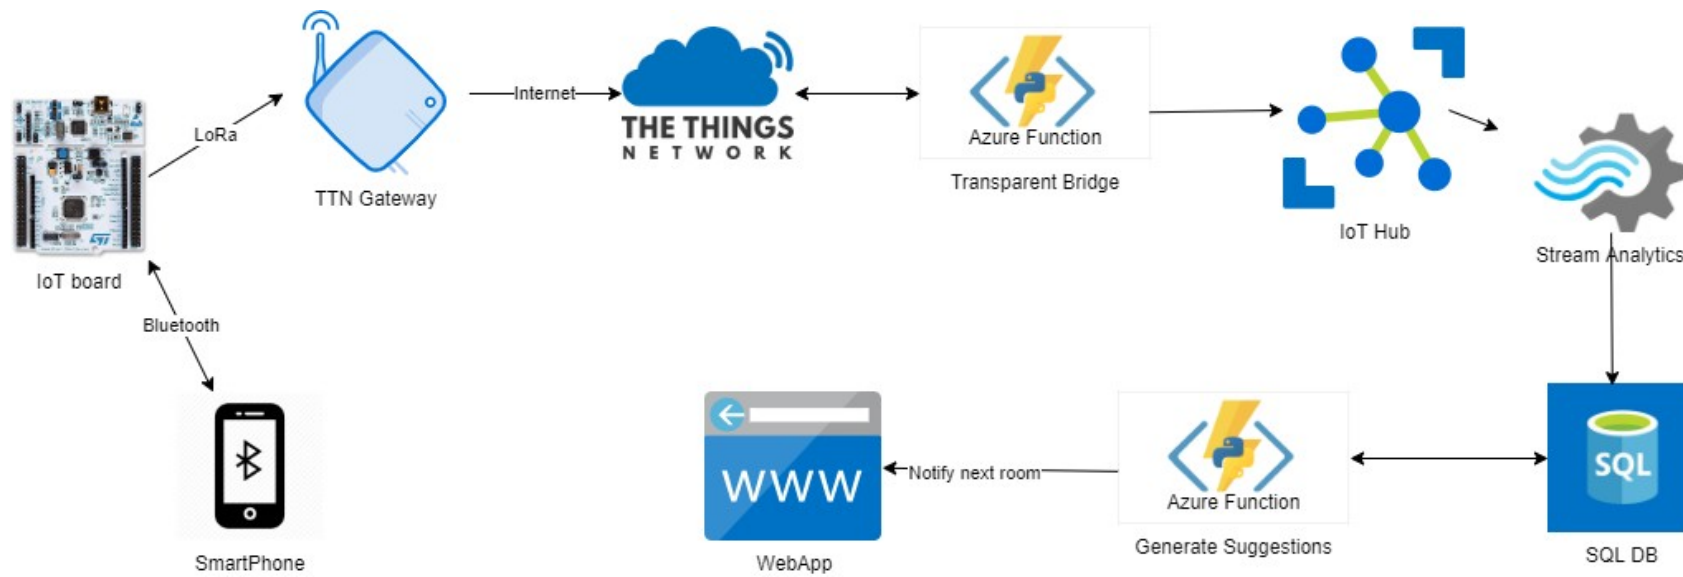

- ▶ LoRaWAN technology
- ▶ The Things Network services

Cloud Services

- ▶ Azure Cloud services
 - ▶ Azure Function
 - ▶ Azure IoT Hub
 - ▶ Azure SQL DB

The complete flow

► Web Application

The background features a series of overlapping, semi-transparent green triangles and polygons that create a dynamic, layered effect. The colors range from a light, pale green to a deep, forest green. The shapes are primarily oriented diagonally, with some pointing towards the top right and others towards the bottom left. The overall composition is modern and minimalist.

Thank you for
